

Create a File of Your Polls Data

Create a Django "fixture" of polls from the database and upload to Google Classroom.

1. Open a command line window and change directory to your ku-polls project:

```
cmd> chdir ku-polls      (on Mac: cd ku-polls)
```

2. Create a JSON file containing polls data:

```
cmd> python3 manage.py dumpdata --indent=2 -o polls.json
```

This creates a file `polls.json` containing your polls data.

3. Upload polls.json to the assignment on Google Classroom.
